

- ① Configuration of n/w Devices using PT tools (Hub, Switch)
- ② Design & config star, bus, hybrid using PT tools
- ③ Configuration of Firewall in PT

1. configure of Network devices.

Aim:

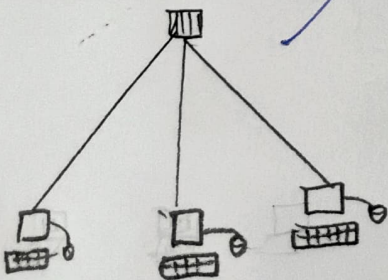

TO configure and connect the network devices such as Hub and Switch using Cisco packet tracer.

procedure:

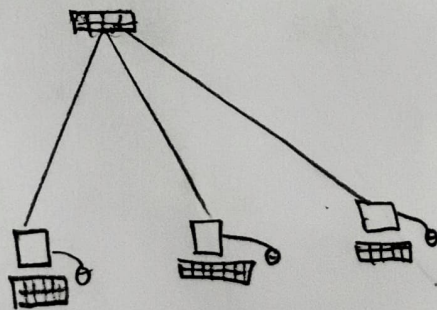

- * Open Cisco packet tracer.
- * Place PCs to the Hub and a switch
- * Connect the PCs to the Hub and switch.
- * Assign suitable IP addresses at all PCs.
- * configure the & verify that data is successfully transmitted.

Diagram:

Hub:

Switch:

Result:

Thus the Hub and Switch were successfully configured.

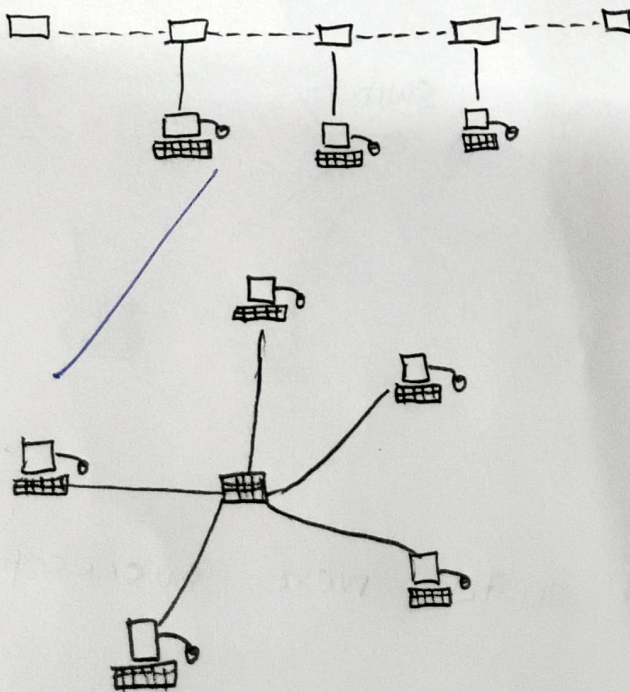

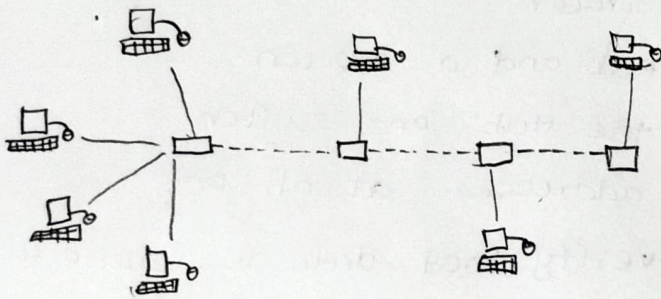

2. Design and Configure Star, Bus, and Hybrid Topologies

Aim:

To design and configure star, Bus and Hybrid network topologies using cisco packet tracer.

procedure:

- open cisco packet tracer
- select the required PCs and networking devices
- Design a star topology by connecting PCs to a central switch.
- design a Bus topology and Hybrid topology connecting PCs to a central switch

Result:

Thus star, Bus and Hybrid topologies were successfully designed and configured in Cisco Packet tracer.

3. Configuration of Firewall in Packet tracer.

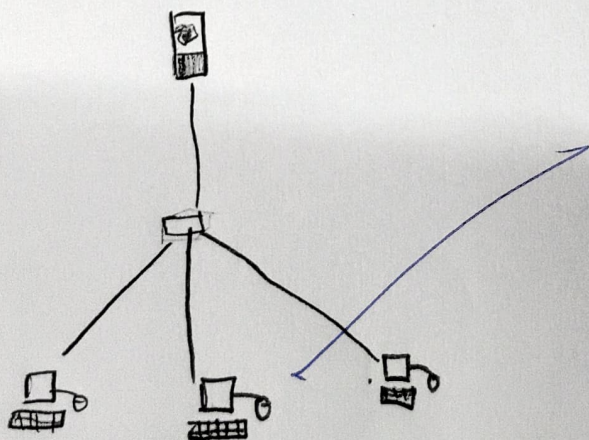

Aim:

To configure a firewall security setup using Cisco Packet tracer.

Procedure

- * open Cisco packet tracer
- * place PCs, Switch and security device.
- * connect the device using appropriate cables.
- * Test connectivity using the Ping command

Diagram.

Result:

The network security configuration was successfully performed in Cisco packet tracer.
